I found that the YIG oscilator soon after the input filter is in short to the ground. This is a 50867850 YIG from HP. Someone have any information about this filter. Where to by a good one used or new. Or information of how can I substitute this YIG for an more easy to buy model The YIG oscillators that Ive worked on, require a bias current within a set range and will not oscillate outside this range. This current can go up to 500ma so you may think that the YIG coil is shorted when it really isnt. What is the resistance of the main coil I already found others YIG but not this one.I cant figure out how to substitute this one for another model. Thanks for the Agilent manual, I did not found a explanation about the YIG coil yet, but have a lot of others usefull informations! Thanks! The 0 DC reading on the SMAs is probably fine. Ill bet they are 50.Measure the current on both coils when it is in circuit and operating. Some basic info on YIG oscillators can be found here. It should give you an idea about how a YTF, or YiG tune filter, works. By continuing to use this site, you are consenting to our use of cookies. It is a high quality method of cooking vegetables for example it preserves vitamins and nutrients. Use no more than 750 ml 6 glasses of liquid.

Use the steam basket; put it on the trivet or suspend it from the rivets on the pan depending on models and take care that the food does not get immersed into the water. Leave your prepared food in the fridge in a closed tub. Once you understand the principles, they can be applied to other recipes. Be sure to include at least 250 ml 2 glasses of liquid. This is used for stews, vegetable, joints of meat and fish dishes. Fast release place the pressure cooker under a cold tap directing the flow of water onto the metal part of the lid. This is used for liquid based dishes such as soups, rice, pasta, milk puddings, egg custards, cake and pudding mixtures, recipes containing rice or pasta and recipes with a high liquid content, in order to avoid the liquid shooting out of the steam valve along with the steam when you release the pressure regulator valve. When the pressure indicator is down, all pressure has been released. The pressure cookers temperature is still warming up.If you are sure

all steam has been released, shake the product and see if the locking indicator pin or pressure indicator depending on models goes down. If it does not, run the cooker under cold water and try opening it again. For this particular purpose, you can buy glass lid for your pressure cooker. For full recipe ideas, please refer to your pressure cooker recipe book or the Website. With a Nutricook, a second ring tone warns to reduce the heat for an endcooking of gentle steam. Refer to the instructions for use for heat sources suitability. Models that feature our exclusive Diffusal base work extremely well on all types of cooking surfaces, including induction. Use a hob with a diameter equal to or less than the diameter of the base of the pressure cooker. For boiling, you can choose whether or not to use it. Warning if the pressure cooker is heated without liquid inside, have it checked by an Approved Service Centre.

Indeed, during cooking they may contain boiling liquid and generate splashes. Do not use bleach or chlorinated products. Turn the assembly over and tighten the nut. DISHWASHER Depending on your model, the number of parts going into the dishwasher will be different. For some models, only the pot is dishwasher safe. For other models, only the pot and lid without the module will be dishwasher safe. For the ClipsoMinut Duo model, none of the parts are dishwashersafe. Note No gasket, timer or module is dishwasher safe. Place it back properly in its slot. If you have a conventional pressure cooker, gently clean the visible part of the seal and the edge of the pot. Never use bleach. If the pressure cooker does not reach pressure and there is steam escaping around the lid, please check that the gasket is fitted correctly. Replacing the gasket for clamp models Pressure cooker, authentique or Actua Remove the old gasket, make sure that the seal housing is clean. Install the new joint by pushing with your fingers in order to insert it in its space. To avoid damaging the gasket, do not use another object. Replacing the gasket for other models Remove the old gasket and replace it with the new one. Turn down the handles if your model allows. Never use any solvents. Just use a clean dry cloth. To carry out the check, refer to the illustrations corresponding to your pressure cooker model. What should I do There is nothing wrong with it. They have a notch and can be used with a flathead screwdriver, so when a handle does become loose or the handle needs to be changed, you can use a flathead screwdriver to tighten them. Torx screwdrivers are available for purchase in most DIY and hardware stores. If there is no damage, please tighten the screws using a flathead screwdriver. If there is damage, you will need to replace the handle. This will not have an impact on taste and is safe to eat. You do not have to worry about these. The cooking times indicated in my recipe book seem too long.

Why When the cooking time has ended, you should turn off the heat and release the steam. The cooking time depends on the quantities, size of the foodstuffs and your personal tastes. If the projections persist often the case with certain types of food lentils. return to the cooking position and make a fast release under cold water. The pressure regulator valve allows the steam to escape the heat should then be turned down and the cooking time calculated. The pressure cooker can now be opened. You can accelerate the release of steam from the pressure cooker by putting it under a stream of cold water. Check the locking indicator pin or pressure indicator depending on models position. To open your pressure cooker, after complete cooling, the locking indicator pin must be put into place. At this point, turn the heat down and calculate the cooking time given in the recipe. Always use high heat to bring the cooker up to pressure. Once that has been done, and you get a strong flow of steam, lower the heat source to establish an even flow and start timing from this point. This is a locking indicator pin or pressure indicator depending on models that rises when pressure builds inside the cooker and drops when it is released. If it does not rise, it may need to be cleaned. It is safe, but if you are concerned, you can wash it off before use. The cooking times must, therefore, be closely followed for good results. It may also be used to simmer or saute before pressure cooking or even stewing with a lid but without a pressure increase. It manages the 2 cooking stages, pressure and gentle cooking. It must therefore be housed in its intended location on the lid. The contractual warranty will not apply if this instruction is not followed. As far as possible,

we recommend that you update your device to a higher Android version or use another compatible device. If it does not, run the cooker under cold water and try opening it again.

For this particular purpose, you can buy glass lid for your pressure cooker. For full recipe ideas, please refer to your pressure cooker recipe book or the Website. If the problem persists take your pressure cooker all parts of it to a recommended service centre. With a Nutricook, a second ring tone warns to reduce the heat for an endcooking of gentle steam. Refer to the instructions for use for heat sources suitability. If you have a conventional pressure cooker, gently clean the visible part of the seal and the edge of the pot. For Stainless steel models, clean the pan with a scouring pad and a specialised stainless steel cleaner. Never use bleach. If the pressure cooker does not reach pressure and there is steam escaping around the lid, please check that the gasket is fitted correctly. Just use a clean dry cloth. To carry out the check, refer to the illustrations corresponding to your pressure cooker model. What should I do. Put it back into the lid without wiping it off. There is nothing wrong with it. They have a notch and can be used with a flathead screwdriver, so when a handle does become loose or the handle needs to be changed, you can use a flathead screwdriver to tighten them. If there is damage, you will need to replace the handle. This will not have an impact on taste and is safe to eat. You do not have to worry about these. The cooking times indicated in my recipe book seem too long. Why. If you let the pressure cooker release steam itself without any decompression, food will continue to cook as the appliance will be under pressure. When the cooking time has ended, you should turn off the heat and release the steam. The cooking time depends on the quantities, size of the foodstuffs and your personal tastes. If the projections persist often the case with certain types of food lentils. return to the cooking position and make a fast release under cold water.
